

predictygraph

READABLE DIAGRAMS INSIDE SLIDES

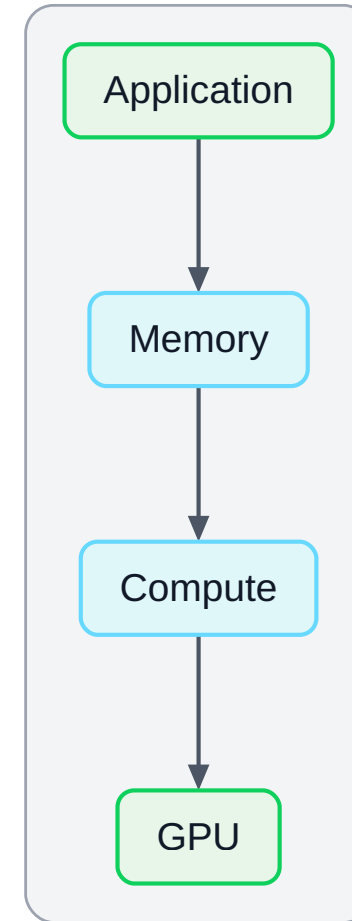

Decktile

Text-to-graph rendering

Architecture

predictygraph draws diagrams from a short text description. Nodes and edges are placed automatically.

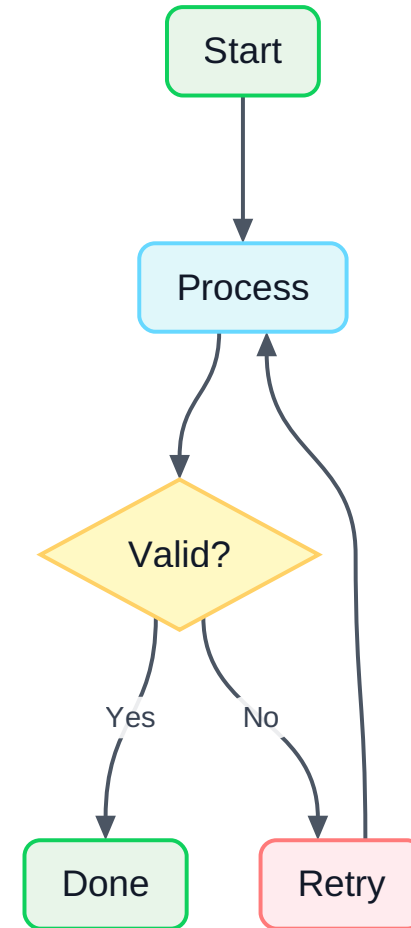

- ▶ Per-group layouts
- ▶ Groups as containers
- ▶ Tag colours from the theme
- ▶ CSS inside the diagram

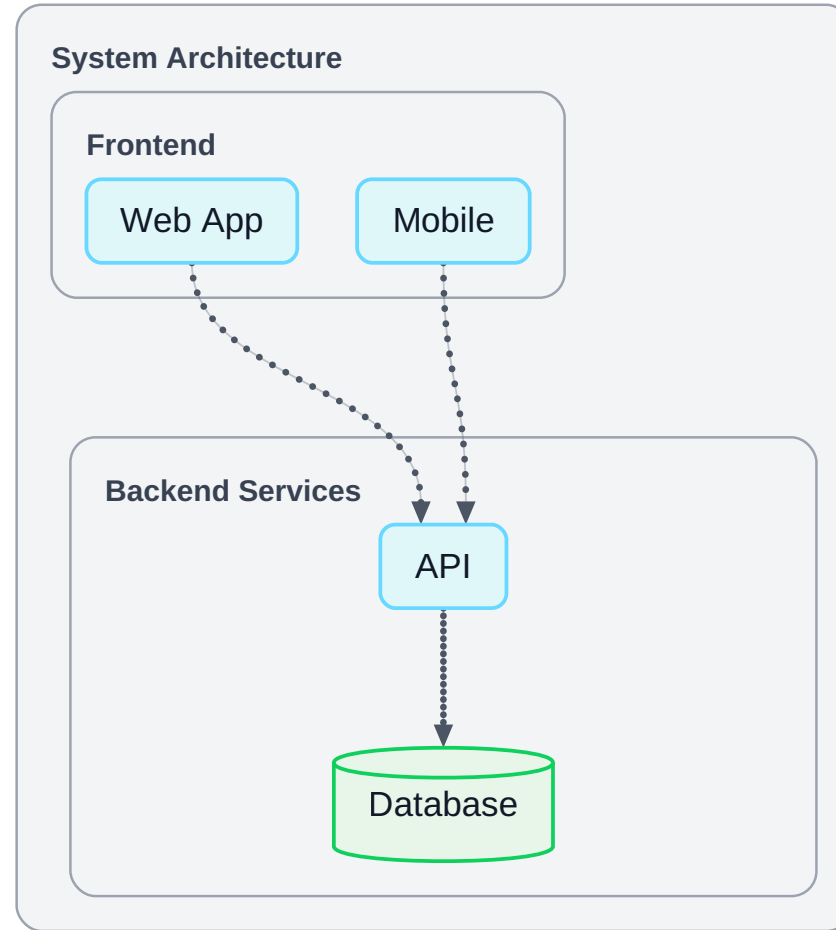

Flowchart

Flowcharts use decision diamonds and process boxes with directional edges to show logic flow.

- ▶ Box shapes for processes
- ▶ Diamond shapes for decisions
- ▶ Edge labels for branches

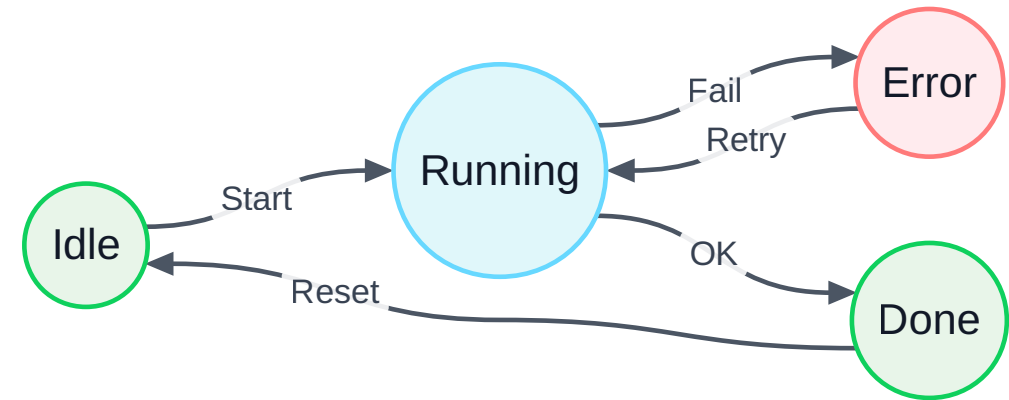

Groups

State Machine

State machines model system behavior with states and transitions. Each state is a node with specific styling.

Animated

In the HTML deck, diagrams can move. PDF and ODP get a clean still frame.

- ▶ flow= dots travel along an edge
- ▶ border=pulse, march, glow
- ▶ Set per edge, per node, or in CSS
